SUMMARY

Full-stack developer with 4+ years' experience building and shipping production software end to end. At Varari, re-architected a legacy ColdFusion system into a modern, role-based mobile platform (Flutter + ASP.NET Core 9) on Google Play — with real-time SignalR/FCM notifications and live KNET payment-terminal integration. Backed by an enterprise foundation in Java, SQL and identity systems from Cognizant.

EXPERIENCE

Full-Stack Developer Jul 2024 – Present

Varari Global Steam · Kuwait

Full-stack developer in a 3-person IT team for a laundry & delivery business, owning the company's flagship mobile platform end to end — from MySQL schema to Flutter UI.

Varari Driver App — Flutter + ASP.NET Core 9 (flagship project)

- Re-architected a legacy ColdFusion/PHP mobile app into a modern, role-based platform — a Flutter (Android) frontend and an ASP.NET Core 9 REST API over MySQL — and published it to Google Play.
- Designed a feature-folder architecture serving multiple operational roles (Driver, Operation, Maintenance, Quality, Cashier) from a single codebase — each role self-contained with its own navigation, screens and providers, routed by JWT after login.
- Built the Flutter frontend with Riverpod (state), GoRouter (routing) and Dio (singleton HTTP client with auth, retry and logging interceptors).
- Built the .NET backend with raw parameterised SQL (MySQLConnector / ADO.NET, no ORM), JWT authentication and a controller-per-domain structure.
- Implemented real-time notifications with SignalR + Firebase Cloud Messaging and polling background services — delivering alerts reliably even when the app is closed.
- Integrated KNET payments — a live PAX card terminal over a persistent TLS socket and KNET Online — driving cash, card and subscription payment flows.
- Delivered barcode scanning, delivery-lifecycle state management, tiered customer credit limits, and reporting ported faithfully from the legacy system.
- Owned IIS deployment, GitHub source control and on-device testing via wireless ADB.

Internal Web & Inventory Systems — jQuery / PHP / MariaDB

- Built the company operations portal (cms.vararilaundry.com) in jQuery, HTML, PHP and MariaDB — driver pickup/delivery reports, time-period tracking and late-delivery monitoring — used daily by operations for ~10 months.
- Developed an internal Inventory / POS system on the same stack where branches order stock and supervisors review all orders from a dedicated dashboard.
- Took over an existing Flutter (Dart/Kotlin) app on a ColdFusion backend — running the CFM admin panel and database locally to maintain it — before leading its migration to the new .NET architecture.

Programmer Analyst Nov 2021 – Jun 2024

Cognizant Technology Solutions · Bengaluru, India

Delivered enterprise Identity & Access Management (IAM) on SailPoint IdentityIQ and ForgeRock for a large-scale client environment.

- Resolved 400+ access-management incidents and service tasks across ForgeRock / OpenDS, meeting SLAs consistently.
- Onboarded applications into SailPoint IdentityIQ using LDAP and delimited-file connectors, and implemented Joiner-Leaver-Mover (JML) identity-lifecycle workflows.
- Automated identity workflows with Beanshell scripting and Java — creating, running and troubleshooting background tasks in IdentityIQ.
- Managed identities, attributes, access provisioning (create / modify / delete), account mapping and audit configurations.
- Administered LDAP / Active Directory groups — creation, cleanup and migration across environments — and authored technical documentation on the team wiki.

SKILLS

Languages: Dart · C# · SQL · Java · PHP · JavaScript · HTML/CSS · Kotlin

Mobile & Frontend: Flutter · Riverpod · GoRouter · Dio · REST API integration · jQuery · Bootstrap

Backend & APIs: ASP.NET Core 9 · REST APIs · JWT auth · SignalR (real-time) · background services · ColdFusion

Databases: MySQL · MariaDB · SQL triggers, transactions & query optimization · phpMyAdmin · LDAP / Active Directory

Integrations & Services: Firebase Cloud Messaging (FCM) · KNET terminals (PAX / TLS & Online) · Google Play Console

Tools & DevOps: Git / GitHub · IIS · Android Studio · Visual Studio / VS Code · Postman · XAMPP · ADB

Enterprise IAM: SailPoint IdentityIQ · ForgeRock · Beanshell scripting · identity lifecycle (Joiner-Leaver-Mover)

Foundational: C · C++ · Python · OOP · Data Structures & Algorithms (academic & small projects)

EDUCATION

B.Tech, Computer Science & Engineering

Gitam University, Visakhapatnam, India · 2017 – 2021
